

PRODUCT FEATURES:

- Automatically switches to rear-view when vehicle is in reverse gear.
- Includes universal lip mounted camera.
- Plug and play installation.

PARTS INCLUDED:

RVCMZ-72 Harness

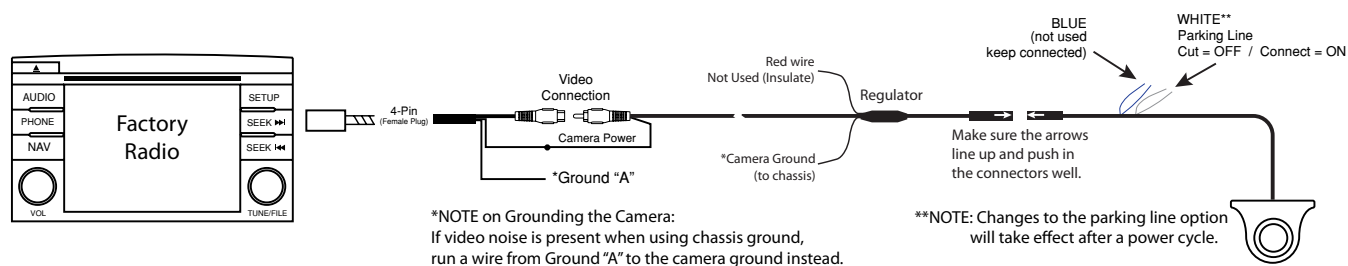

CUL-04 Camera

20 ft. Extension Cable

INSTALLATION DIAGRAM:

Installing the Camera

NOTE: Test the camera for functionality prior to finalizing the installation.

1. Remove the rear panel between the Mazda emblem and license plate using a panel removal tool.
2. Drill a 5/8" size hole in the location.
3. Fish the camera cable through the drilled hole into the trunk area.
4. Remove the factory radio to gain access to the connectors.
5. Route the camera cable towards the radio and make the power and video connections. Tap the red wire from the camera cable (coming out of the yellow RCA) to the red wire of the RVCMZ-72 harness. The red wire (near the camera) is NOT used. Insulate it to prevent it from shorting. Tap the ground wire (black) near the camera to a solid chassis ground. If for some reason video noise is present, the RVCMZ-72 provides a ground wire which can then be used to ground the camera instead of using chassis ground. See diagram for reference.

VEHICLE APPLICATIONS:

Mazda (with factory screen)

2013 - 2015	CX-5
2007 - 2012	CX-7
2007 - 2015	CX-9
2011 - 2015	Mazda6
