

PARTS INCLUDED:

USB cable Type-C to Type-A

USB cable Type-C to Type-C

ACP-TSL module

PRODUCT DESCRIPTION:

The ACP-TSL is a product that seamlessly integrates with Tesla vehicles and enables wireless CarPlay/Android Auto functionality. To use it, all you need to do is plug it into your car's original USB port and follow the provided instructions. Once connected, the ACP-TSL syncs your phone's online map, music, and voice assistant with the OEM touchscreen, providing a convenient and user-friendly driving experience.

PRODUCT FEATURES:

- Integrates wireless CarPlay and Android Auto to OEM touchscreen.
- Supports voice control, Siri & other Voice Assistant Apps
- Supports GPS Navigation Apps (Apple Maps, Google maps & Waze).
- Supports Online Music Apps (Apple Music, Spotify, Pandora, SoundCloud & Tidal)
- Supports Split Screen Function.
- Completely plug and play.

INSTALLATION DIAGRAM:

• Wireless CarPlay Connection diagram

• Wireless Android Auto Connection diagram

COMPATIBILITY:

2017 and Up Model 3
2012 and Up Model S
2020 and Up Model Y
2015 and Up Model X

CarPlay: iPhone 6 + with iOS 10 +

Android Auto: Android phone with Android 11.0 +

LED INDICATOR DESCRIPTION:

Mobile phone interconnection status: Green led flashes slowly after successful connection.

WIFI connection status: Green led will stay on when connected successfully. Green light represents 5GHz frequency; orange light represents 2.4Ghz

Power status indication: This green led will turn on after the product is powered on.

4G status indication: Greenlight will flash slowly successfully connecting to network. A green & blue led flashing slowly means no cellular network connection. Orange led flashing slowly when connecting to network is connection failure or SIM is not connected

1. Connects to the WiFi signal of the product via your phone.
2. Enter the URL: 192.168.3.1 in the browser with the phone
3. Enter the website background to set the relevant options
4. Click online upgrade to update to the latest version

PRODUCT SPECIFICATION:

Power Input: 5V±0.2V

Wireless Network: 802.11 a/b/g/n/ac, 2.4Ghz+5Ghz

Power Consumption: 3W

Bluetooth Version: 4.2

Resolution: Adaptive (maintain the original protocol resolution)

Languages: Support multiple languages

Working Environment: -20°C - 75°F

Product Size: 79x58x15.8mm

Package Dimensions: 99x99x39mm

Port: LED lightm ZType-C female port, Nano SIM card slot

FAQ:

Q: Can cellular device be manually connected to the ACP-TSL WiFi?

A: To avoid your phone's WiFi network traffic being used by the device, it is important not to manually connect to the device's WiFi when entering wireless CarPlay. In the event that you accidentally connect to the device's WiFi, it is recommended that you click on "Ignore this network" after connecting to CarPlay to prevent any issues.

Q: Which USB port of the vehicle should the ACP-TSL be plugged into?

A: The device can be plugged into the vehicles USB port or Type C port near the center console.

FAQ:

Q: After the vehicle goes to sleep why does the device still power on?

A: The device is forced to power off after 15 minutes after you lock the vehicles.

Q: The cellular device is unable to establish a connection on the device?

A: Please verify if the 4G network is functioning correctly (as indicated), and check for any issues with the SIM card or network connectivity. The product's WiFi will only be enabled in compliance with the car's security policy, which requires a stable connection to the 4G network for both wireless and automotive network connectivity purposes.

Q: When located in an underground parking lot, the product cannot establish a connection?

A: Tesla's security protocol prompts disconnection from a WiFi hotspot if it fails to provide a network connection. It is recommended to switch to a carrier with stronger signal coverage, based on your current network environment.

Q: My Tesla does not support http and needs to support https access?

A: This can be resolved by accessing <https://tespush.com> (<https://tespush.com/>)

Q: What is the difference between cellular and non-cellular version?

A: The device with cellular connectivity has its own 4G network connection and does not require a separate mobile phone for connectivity. operates on its own 4G network. On the other hand, a non-cellular device needs to be connected to a mobile network of a phone in order to access the internet or network services.
