 * For SWC Learning Radios specific steps are required. Please scan the QR code on the right.

SWC TROUBLESHOOTING OPTION

Located internally, need to take plastic casing off module

If Steering Wheel Controls don't work or work properly, please switch internal DIP switch from 3v3 to 5v as shown in picture above.

SWC Module
DIP Switch

For aftermarket radios that have wires for SWC connections, cut off the 3.5mm plug on the Crux SWC Cable and connect the SWC wires as follows:

Note that there are some radios that only have SWC1 and SWC2, in this case "shield" does not need to be connected.

SELECTING THE AUDIO SYSTEM:

If the vehicle is equipped with an amplified audio system, the DKGM-48D has a built-in audio level adaptor that outputs the proper audio level from the aftermarket radio to the factory amplifier. To use this feature, plug in the male 8-PIN connector on the DKGM-48D harness to the GRAY female 8-PIN connector on the SWRGM-48 module. The module is also labeled "BOSE" and "NON BOSE" to avoid confusion. (see image for reference)

If vehicle is NOT equipped with a factory amplified system, plug-in the male 8-PIN connector the the BLACK female 8-PIN on the DKGM-48D module.

CHIME VOLUME ADJUSTMENT:

The DKGM-48D has a potentiometer to adjust the chime volume. It is set at the half way by default. To adjust the volume, simply use a suitable screwdriver and turn the potentiometer clockwise to increase the volume and counter-clockwise to decrease the volume.

DASH KIT INSTALLATION:

Please make sure that you have all the parts shown below.

- (1) Main trim ring
- (1) Left ISO mounting bracket
- (1) Right ISO mounting bracket
