SELECTING THE AUDIO SYSTEM:

If the vehicle is equipped with an amplified audio system, the DKGM-49 has a built-in audio level adaptor that outputs the proper audio level from the aftermarket radio to the factory amplifier. To use this feature, plug in the male 8-PIN connector on the DKGM-49 harness to the GRAY female 8-PIN connector on the DKGM-49 module. The module is also labeled "BOSE" and "NON BOSE" to avoid confusion. (see image for reference)

If vehicle is NOT equipped with a factory amplified system, plug-in the male 8-PIN connector the the BLACK female 8-PIN on the DKGM-49 module.

CHIME VOLUME ADJUSTMENT:

The DKGM-49 has a potentiometer to adjust the chime volume. It is set at the half way by default. To adjust the volume, simply use a suitable screwdriver and turn the potentiometer clockwise to increase the volume and counter-clockwise to decrease the volume.

BACKUP CAMERA CONNECTION:

You can retain the factory back-up camera by using the CRUX 2543 harness included in the kit.

1. Connect the 16-PIN back-up camera harness to the vehicle's 16-PIN factory backup camera connector.
2. Connect the Yellow video RCA to the new aftermarket radio camera input.
3. Test the video feed before installing the radio back into the dashboard.

NOTE: Does not retain the factory backup camera on models that show the camera image on the rearview mirror.
